DECLARATION OF ORIGINALITY AND ACADEMIC INTEGRITY

Course Module:	SWE 3513 – Artificial Intelligence
Assignment Title:	Individual Assignment 2 – Musanze Harvest Intelligence Service
Student Full Name:	**Deng Fajwan Changjwok Fajwan**
Registration Number:	**25/28110** (Clean Digits: 2528110)
Institutional Username:	ug2528110@ines.ac.rw
Verification Code:	**AI-A2-8110** (Seed: 8110)
Dataset SHA-256 Fingerprint:	`6f94df679bcd2c644aab4eceed2cfb02b09a5ddddbfa920c7dc2c018d59e1d5d`

I, **Deng Fajwan Changjwok Fajwan**, do hereby solemnly declare that the practical deliverables, machine learning pipeline source code, trained model artifacts, analytical report, and demonstration evidence submitted for Individual Assignment 2 represent my own individual intellectual work, formulated under the academic supervision of INES-Ruhengeri.

I further affirm and verify the following specific stipulations:

- **Individual Data Generation:** The accompanying synthetic dataset was deterministically generated utilizing my personal registration seed (`LLLL = 8110`), producing an exact base row count of 273 records (240 + 8110 mod 41) and 276 total records with deliberate missing values and duplicate rows, matching the authoritative SHA-256 fingerprint above.
- **Zero Plagiarism:** No portions of this code, metric evaluation, or technical report have been copied, adapted, or procured from another student's assignment or unauthorized external repository.
- **Target Leakage Compliance:** The machine learning pipelines strictly respect anti-leakage boundaries; targets (`yield_tons` and `high_risk`) and derived attributes (`yield_per_ha`) are strictly excluded from all training and inference feature sets.
- **Defense Readiness:** I have personally tested and validated the prediction CLI and FastAPI service, and I am fully prepared to defend this AI decision system in a live oral examination, explain any code decisions, and execute live modifications requested by the assessor.
